DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1, 5-8, 11-19 and 32, drawn to a trilumen catheter, classified in class 604, subclass 523.
 - II. Claims 23, 24, and 31, drawn to a balloon catheter, classified in class 604, subclass 96.01.
2. Inventions I and II are directed to related products. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the catheter of group I can be used in a situation where a catheter with an inflation lumen and balloon is not needed; and the catheter of group II can be used in a situation where a third lumen for a mandrel is not required. Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.
3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
